Agenda

Meeting notes

Training structure

- Gayathri explained that the training session will be divided into two halves: learning in the first half and hands-on activities in the second half.
- Gayathri stated that the training will span 13 weeks, focusing on business logic and deep dives into technical topics based on participants' prior knowledge.

Session participation

- Gayathri emphasized the importance of keeping cameras on during the session to encourage interaction and ensure understanding.
- Gayathri requested participants to interact via Teams reactions and chat to confirm their presence and engagement during screen sharing.
- Gayathri encouraged participants to share unique personal traits or interests to help them be remembered, instead of relying on repeated food preferences.
- Kirti introduced themselves as an upcoming computer science graduate from VIT, shared their experience as an AI intern at Voltronics, and expressed interest in learning diversified domains and system architecture.
- Afan introduced themselves as a participant from VIT Vellore, mentioned their previous work experience, and shared their unique sleep schedule as a personal trait.
- Dhanush introduced themselves as an upcoming graduate from JNTH Hyderabad, highlighted their experience in full-stack web development, content creation, and freelance work, and shared their interest in tech-related memes.

Attendance guidelines

- Gayathri strongly suggested avoiding taking leave during the training to maintain continuity and keep up with the heavy volume of content.
- Gayathri explained that participants should avoid taking leave during training sessions to ensure continuity and understanding, and notify Gayathri or Muller if leave is necessary.

Session support

- Gayathri mentioned that Punmala will join after lunch to provide support throughout the session.
- Gayathri clarified that session recordings are not freely available; participants must request access and provide a reason if they need the recording.

Training expectations

- Gayathri stated that multiple technologies will be covered in a short span, and participants may need to adjust to the fast

pace.

- Gayathri emphasized that hands-on activities are mandatory, and the focus should be on understanding how the code works rather than just copying or generating code.

AI-driven project workflow

- Gayathri explained that participants will generate a full application using AI based on provided tech stack and specs, then analyze and tweak the AI-generated code daily to understand its strengths and limitations.

Capstone project structure

- Gayathri stated that participants will work on a capstone project in parallel, using reverse engineering by first generating the project with AI and then learning from it throughout the training.

Training sequence

- Gayathri clarified that participants will start with database work before moving to backend development, with a focus on understanding AI capabilities.
- Gayathri explained that participants will start with database design to ensure a strong foundation for the application, followed by backend development, front end design, and then front end coding.
- Gayathri detailed the training sequence, starting with basic and complex PostgreSQL queries, stored procedures, geospatial queries, followed by backend development in C#, database connectivity, web APIs, frontend development in Angular, and styling with CSS, Bootstrap, or Material.
- Gayathri explained that participants will work on Figma designs while learning Angular basics, then tweak backend and leverage the front end as part of the training flow.

Session logistics

- Gayathri announced they will use Windows OS for the current session and switch to Mac OS after updates are completed, likely starting Monday.
- Gayathri explained the schedule for morning, lunch, and evening breaks, and instructed participants to log off and log in to different bridges as needed, and to notify in chat if stepping away for an extended period.
- Gayathri explained the process for logging off and logging in to different meeting bridges during lunch and breaks.
- Gayathri clarified that participants should leave a message in the chat if stepping away for more than 5-10 minutes during the session.

Application architecture

- Gayathri emphasized the importance of understanding how data is stored and provisioned, as well as how business logic connects database, backend, and front end requirements.
- Gayathri highlighted that non-functional aspects such as performance and security will be addressed after business logic implementation in both backend and frontend development.
- Gayathri explained that non-functional requirements such as performance, security, locale, and time zone must be considered when designing applications.

Application security

- Gayathri shared an example of a chatbot exposing sensitive order and payment details due to lack of security checks, emphasizing the importance of securing customer data.
- Gayathri reminded participants that passwords must not be stored in clear text for security reasons.

Application deployment

- Gayathri described the planned Azure provisioning setup, including private and public subnets, app containers, and internet gateway configuration.
- Gayathri outlined the Azure deployment process, including dockerizing backend and MySQL, containerization, configuring

networks, provisioning databases, maintaining security, event-based triggering, and orchestration with AKS.

Training technology stack

- Gayathri outlined the technology stack for the training: PostgreSQL for the database, .NET web APIs for the backend, Angular for the frontend, Azure for the cloud, and Event Grid for messaging, with Docker containers managed by Azure Kubernetes Service.
- Gayathri reiterated that the technology stack for the project is mandatory: Angular for frontend, .NET Web API for backend, and PostgreSQL for database.

Training logistics

- Gayathri instructed participants to wait for company-provided Azure accounts before practicing on Azure, and to use personal accounts only if necessary, with caution.
- Gayathri clarified that Azure access will be provided later; participants should use personal accounts cautiously if they wish to practice before company accounts are available.

Participant introductions

- Sayan introduced themselves as a graduate from SSN College of Engineering, shared their internship experience at a government organization, and mentioned their interest in music and playing multiple instruments.
- Srimani introduced themselves as a freelancer since high school, described their early project experience with Django, and expressed enthusiasm for exploring new technologies.
- Dharshini introduced themselves as a graduate in Computer and Communication Engineering, highlighted their software development internships, and shared their interest in reading fiction.
- Seema introduced themselves as a graduate from Sri Shakti Institute of Engineering and Technology, noted their passion for crafts and music, and mentioned their unique name.
- Krishna and Dixit introduced themselves, with Krishna highlighting their cloud certifications and interest in cloud technologies, and Dixit sharing their background in data science and interest in online gaming and streaming.
- Sushman introduced themselves as a participant from Bangalore, shared their experience making all technical decisions at a startup without other technical staff.
- Sabareesh introduced themselves as a participant from Irod, Tamil Nadu, highlighted their interest in role-playing and open world games like GTA 5 and Red Dead Redemption 2.
- Pratik introduced themselves as a participant from Odisha, noted their unique regional background, and shared greetings in their local language.
- Sarvesh introduced themselves, mentioned their passion for reading and recommending books, and shared their experience working at a startup that lasted two weeks.
- Aksha introduced themselves as a participant from Madurai, described their interest in full stack development, and mentioned creating a quiz application used for placement activities.
- Nipun introduced themselves as a participant from Delhi, shared their experience in esports teams for CSGO and Valorant, and mentioned their interest in cooking.
- Nipun introduced themselves as a participant from Delhi, shared their experience in esports teams for CSGO and Valorant, and mentioned their interest in cooking.
- Anupriya introduced themselves as a participant with a master's degree in RBC, expressed their interest in machine learning and mathematics, and highlighted their unique name meaning.
- Padmavathi introduced themselves as a participant from Tamil Nadu, described their interest in DevOps, freelancing experience, passion for horror movies, script writing, and driving vehicles.
- Shiva introduced themselves as a Computer Science and Design graduate from Iro, shared their preference for coding over designing in Figma, and mentioned their love for travel.
- Mandiraja introduced themselves as an Artificial Intelligence and Data Science graduate from VSB College, highlighted their internship at Zoho, and shared their interest in AI and data science.
- Vinian introduced themselves as an Electronics and Instrumentation Engineering graduate from Kong Engineering College, described their curiosity for learning new domains, and shared their hands-on project experience.
- Preetam introduced themselves as a fourth-year student from Hyderabad, mentioned their hobbies of playing cricket and

chess, and expressed excitement to work with the group.

- Vaibhav introduced themselves as a postgraduate from NIT, shared their experience in full stack development, and noted being the only postgraduate in the group from their institution.
- Bhargav introduced themselves as a graduate from CBAT Hyderabad and shared their interest in reading classic literature.
- Vignesh introduced themselves as a graduate from Combinjini College, expressed their interest in full stack development and cloud technologies, and mentioned enjoying cricket.
- Abubakkar introduced themselves as a dual degree student from Sreeshar College of Engineering and IIT Madras, highlighted their hackathon achievements, marathon participation, startup experience, and content creation activities.
- Sivaprakash introduced themselves as an upcoming graduate from Sri Krishna College of Technology, shared their experience building apps independently, and mentioned interests in fitness, art, and writing Tamil poems.
- Devish introduced themselves as a graduate from Bhandari Man Institute of Technology, highlighted the uniqueness of their name, and shared experiences with people mispronouncing it.
- Aravind Vikram introduced themselves as a graduate in Computer Science and Business Systems, expressed interest in software development and cloud, and shared their passion for long-distance driving.
- Laxman introduced themselves as a graduate from Sri Ishwar College, discussed their work in full stack development and generative AI, and noted the frequent misspelling of their name.
- Aswin introduced themselves as a graduate in Electronics and Communication Engineering, and shared their habit of watching three to four movies in a single day.

Session schedule

- Gayathri announced that there will be no session tomorrow due to elections in Tamil Nadu.

Session agenda

- Gayathri stated that the afternoon session will cover expectations for what participants need to build and do today.

Project requirements

- Gayathri outlined the requirements for the bus booking system, including user roles, viewing buses without login, and pre-populated source and destination fields with fuzzy logic.
- Gayathri specified that users should be able to search for buses by source, destination, and date, select a bus, and reserve seats with a layout reflecting bus capacity.
- Gayathri explained the seat reservation logic, including a grace period for blocking seats and displaying available seat counts when listing buses.

Payment and confirmation

- Gayathri stated that payment can be handled via a dummy gateway or integrated with Stripe or RazorPay, and ticket confirmation should be downloadable, with optional email and message confirmations.

User authentication and booking

- Gayathri clarified that users must log in to book seats, can reserve multiple seats per booking, and must provide passenger details such as name, age, and gender.

Booking management

- Gayathri described that logged-in users can view previous bookings and cancel bookings, with cancellation restricted to at least 24 hours before departure.
- Gayathri emphasized that seat availability must be updated immediately when bookings are cancelled, making previously booked seats available to other users.

User booking requirements

- Gayathri explained that users can book multiple seats in one booking and must provide name, age, and gender for each

passenger.

- Gayathri stated that users booking multiple seats must provide name, age, and gender for each passenger.

User booking management

- Gayathri stated that logged-in users can view their travel history, including upcoming, past, and cancelled bookings, and can cancel bookings based on business rules such as refund percentages for different cancellation windows.

User authentication

- Gayathri clarified that user identification can be handled via email, phone number, or simple username and password, and single sign-on is optional but not mandatory.

Bus operator role and permissions

- Gayathri described that bus operators must register and be approved by the admin before logging in, can add buses (subject to admin approval), and can temporarily or permanently remove buses without approval.

Bus operator requirements

- Gayathri explained that bus operators must provide the vehicle registration number when adding a bus, can upload or select bus layouts, view bookings for their buses, and set seat prices with a single pricing model.
- Gayathri explained that bus operators must have a presence at both source and destination addresses, and can add new locations if needed when setting up routes.

Bus operator permissions

- Gayathri explained that bus operators can view bookings for their buses and set a single price per seat, without dynamic pricing.
- Gayathri stated that bus operators should be able to view their revenue and bookings in the admin panel.
- Gayathri explained that bus operators can view their revenue and bookings, and must be approved by the admin before adding buses.
- Gayathri confirmed that multiple buses can operate on the same route and destination, with timing determined by the operator.

Bus layout requirements

- Gayathri clarified that seat layouts can be uploaded or generated based on the number of seats, and the layout must be available during booking.

Booking edge cases

- Gayathri discussed optional edge case restrictions, such as indicating female-booked seats in the layout, but left implementation details to participants.

Payment and platform fee

- Gayathri explained that the booking price shown to users should include a platform (convenience) fee, which can be a fixed amount or percentage, adjustable in the admin panel.

Admin responsibilities

- Gayathri clarified that admins are responsible for approving operators and adding sources, destinations, and routes, but do not need to approve customers.
- Gayathri stated that admins can enable or disable bus operators, and when an operator is disabled, both the operator and affected customers must be notified, with booking status updated and refunds communicated.

Bus operator registration and route setup

- 
- Gayathri detailed that after admin approval, bus operators must provide addresses for each location where they have a presence, which will be used as pickup and drop-off points for routes they operate.

Route and address assignment

- Gayathri stated that admins add only sources and destinations, and bus operators select routes to operate; the operator's address at each location becomes the boarding and drop-off address for bookings.

Route structure

- Gayathri emphasized that the system will only support point-to-point routes without intermediate pickup or drop-off points.
- Gayathri clarified that all bus routes are point-to-point, with no intermediate pickup or drop-off locations allowed.

Follow-up tasks

	Task	Assigned to	Due date	Bucket
1	❖ Send email notification to customers when their booking is cancelled due to operator deactivation, including refund details and optional alternative operator suggestions (Gayathri)			
2	❖ Optimize and summarize client requirements before submitting to AI tools to minimize input tokens (participants)
